DESIGN CONCEPT STATEMENT

The hotel is located in Beijing. Beijing is the capital of China, but it also has many places of interest and traditional buildings. These traditional buildings represent thousands of years of Chinese history and culture. Many buildings in Beijing are made of wood. This is closely related to China's natural resources and traditional technologies. Most of the palace buildings were built in the han and tang dynasties with a tradition of craftsmanship and almost family craftsmen.

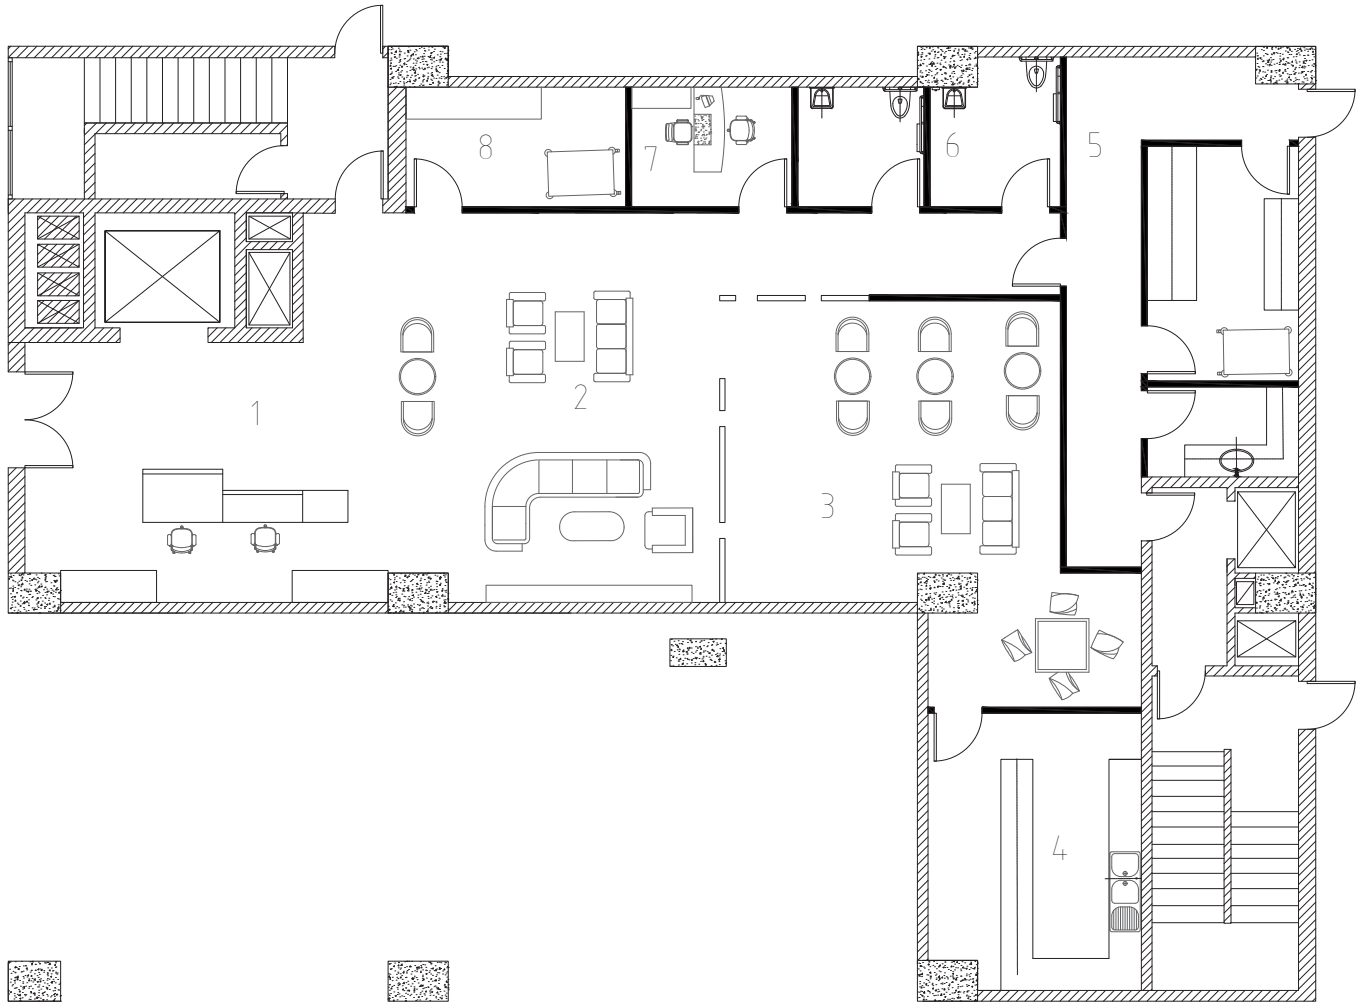

DESIGN BRIEF

The design concept of the hotel combines the wooden materials of traditional Beijing buildings with the square shape of the quadrangle courtyard. As a result, most of the furnishings are made of wood, and most of the shapes are rectangular or round. In the lobby, the guest rooms will also have screens. Chinese tea culture is also used in hotel design. The main customers of my hotel are tourists who come to Beijing. Here, visitors will experience the characteristics of Beijing's traditional architecture. As the scale of the hotel is not very large, so customers tend to come to the hotel for a holiday of 3-4 days. The cafe on the ground floor is a public area for tourists. There are four different kinds of rooms to choose from. Two of the suites have separate balconies.
