# Que puede provocar aguantarse mucho las ganas de hacer pis?

## Yahoo Respuestas:

1. Cistitis: Inflamación de las paredes de la vejiga con la acumulación de los microbios.
2. Reflujo: La orina retrocede desde la vejiga a los riñones. Podría generar dolor o infectar organos
3. Ensanchamiento de la vejiga: Puede generar asincronías a la hora de hacer pis. Incapacidad para controlar.
4. Cólicos nefríticos: Acumulación y sedimentación de sales y minerales de la orina en los riñones.
5. Otras posibles infecciones.
7. Peeeeeero también, **Mucho placer**
